

## Gabon FTG survey completion

Milton Keynes, 31<sup>st</sup> August 2018

**AustinBridgeporth is pleased to announce it has successfully completed an airborne Full Tensor Gravity Gradiometry (FTG) and magnetic survey for Maurel & Prom over their Kari and Nyanga-Mayombe licences, onshore Gabon.**

The survey, using a dense survey design, covering nearly 3,500 square kilometres, was completed on time, on budget and without incidents.

An FTG survey provides a means to cover a vast area quickly, with minimal environmental footprint and deliver high-fidelity geological information. Fast-tracked processing permits seismic lines to be optimally positioned.

The objectives of the survey are to provide constraint on the basement architecture as well as provide information on the Ezanga salt structures.

Dr Frédéric Assouline, Chief Geophysicist at Maurel & Prom said “we are pleased that the survey was acquired without incident, on time and on budget. The data is allowing us to discern between two different basement models. We look forward to working with ABI to develop the interpretation further.”

Dr Mark Davies, CEO AustinBridgeporth said “We were extremely pleased to be awarded this project by Maurel & Prom and are delighted that the survey was acquired without incidents and that the data is playing a key role in the exploration of this area.”

### About Maurel & Prom

Maurel & Prom is an oil and gas exploration and production company. It is listed on Euronext Paris and has its registered office in Paris. Maurel & Prom is well known for its onshore E&P expertise in Africa and Latin America and has a portfolio of high-potential assets covering all exploration, development and production activities. The Group currently operates production assets in Gabon and Tanzania, and also holds a significant stake in SEPLAT, one of Nigeria’s leading operators. Since February 2017, Maurel & Prom has been backed by Pertamina Group and aims to become its international development platform.
